

Muhammed Malik KS

muhammedmalikmalik@gmail.com | +91 9539224041

PROFILE

Motivated and detail-oriented Computer Science undergraduate with a strong foundation in programming, cybersecurity, and software development. Passionate about building impactful tech solutions and continuously expanding knowledge in AI, cloud, and secure systems.

Proven ability to work independently and collaboratively on technical projects.

EXPERIENCE

Arcio, Quality Assurance Tester 2025 – Present

- Designed and executed manual test cases to validate application functionality and performance.
- Collaborated with developers to improve product quality and reduce post-release issues.
- Conducted regression and integration testing before deployments.

Wiremetrics, SQL Developer 2023 – 2025

- Managed and maintained relational databases for performance and reliability.
- Performed backup, recovery, and performance tuning.
- Ensured data integrity, security, and access control.
- Generated reports using advanced SQL queries.

Wogle Tech, Internship on cybersecurity 03/2025 – Present

- Conducted security audits and identified potential risks.
- Studied and implemented secure coding practices.
- Monitored network activity and analyzed security logs.

IBAND Technologies, INTERN 06/2024 – 07/2024

- Developed and tested Android applications using Java/Kotlin.
- Implemented UI components following Material Design principles.

EDUCATION

BTECH IN COMPUTER SCIENCE, Kerala Technical University 03/2027 | KMEA Engineering College
CGPA: 8.38 Grad: March 2027

PCM WITH COMPUTER SCIENCE, GVHSS Thrikkakkara 03/2023
Grad: March 2023

Domestic Biometric Data Operator, NSQF 2021 – 2023

SKILLS

PROGRAMMING: Java | C | Python | Shell | PHP | MySQL

TECHNOLOGIES: Machine Learning (scikit-learn, pandas)

PROJECTS

AI-Based Screenshot Scanner for Sensitive Info

Built an offline Python-based tool that detects sensitive information (like OTPs, passwords, Aadhaar numbers) from screenshots using OCR and regex. Integrated a GUI for easy image upload and automatic blurring of detected elements. Tech Used: Python, Tkinter, Tesseract OCR, Regex

Fruit Classification using ML, CNN & Fuzzy Logic

Developed a machine learning-based fruit classification system using image data. Implemented CNN for feature extraction, RNN/LSTM for sequential modelling, and fuzzy logic for handling uncertainty in predictions. Achieved high accuracy in distinguishing multiple fruit types based on color, texture, and shape. Tech Used: Python, TensorFlow/Keras, OpenCV, Fuzzy Logic, NumPy, Matplotlib
